

Be the Human in the Loop

AI can accelerate your work. It does not remove your responsibility.

Generative AI can write, summarize, analyze, research, organize, brainstorm, and help you think. It can also misunderstand your request, overlook important context, or produce information that sounds convincing but is wrong. The more important the task, the more human review matters.

— Three Rules

- 1. Protect Sensitive Information
- 2. Review Important Outputs
- 3. Humans Own Decisions

— Match Your Review to the Stakes

Low stakes

Brainstorming, casual email, organizing notes—light review may be enough.

Medium stakes

Business recommendations, customer communication, research, data interpretation—review carefully.

High stakes

Legal, financial, medical, employment, safety, major strategic decisions—use qualified human judgment.

— Before You Rely on It, Ask:

- Is it accurate?
- Does it fit my actual situation?
- What important context might be missing?
- What assumptions is it making?
- Have I checked the important facts?
- How serious would it be if this were wrong?
- Would I be comfortable putting my name on this?

AI CAN ACCELERATE JUDGMENT. IT DOES NOT REPLACE JUDGMENT.
